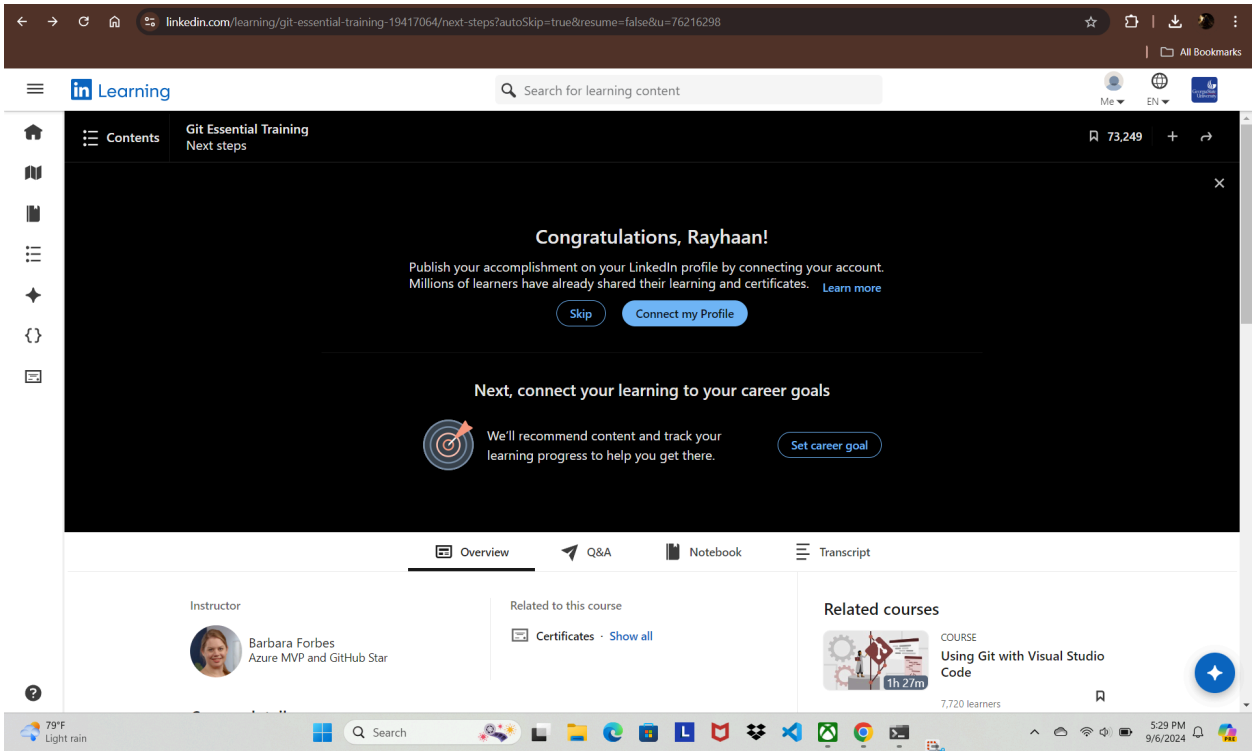
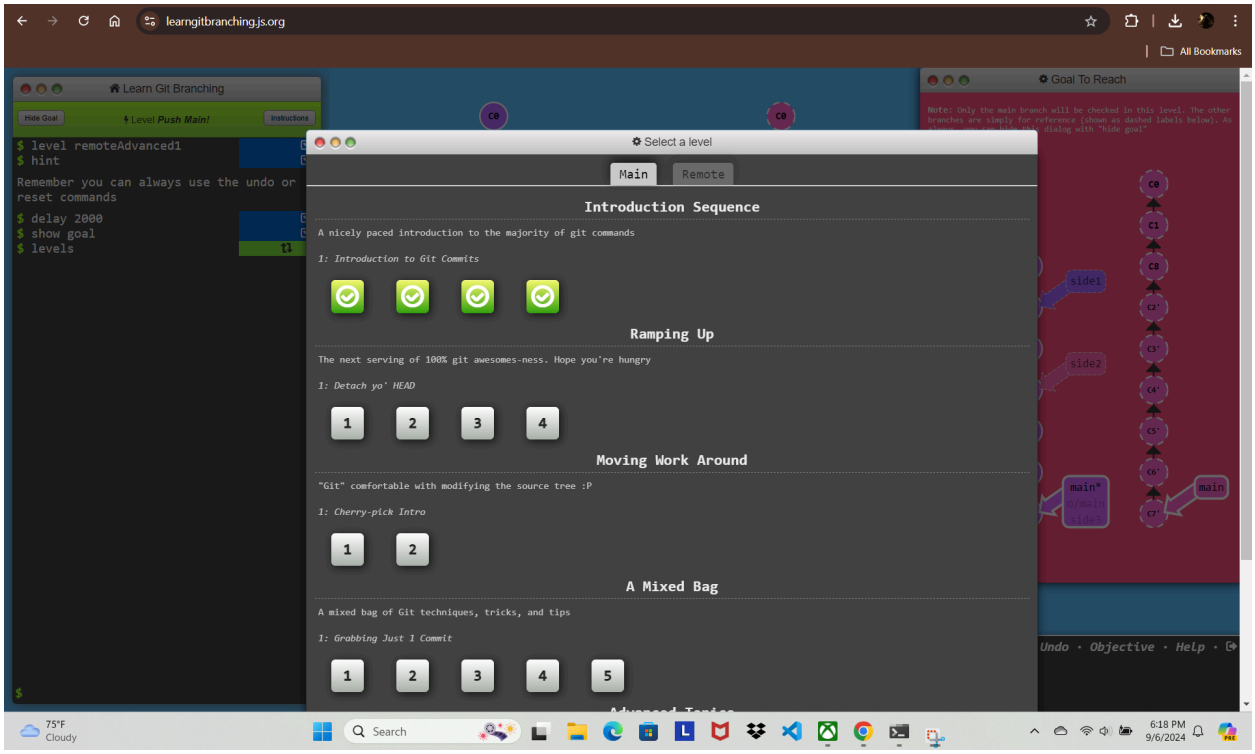
CSC 4370 Assignment 0

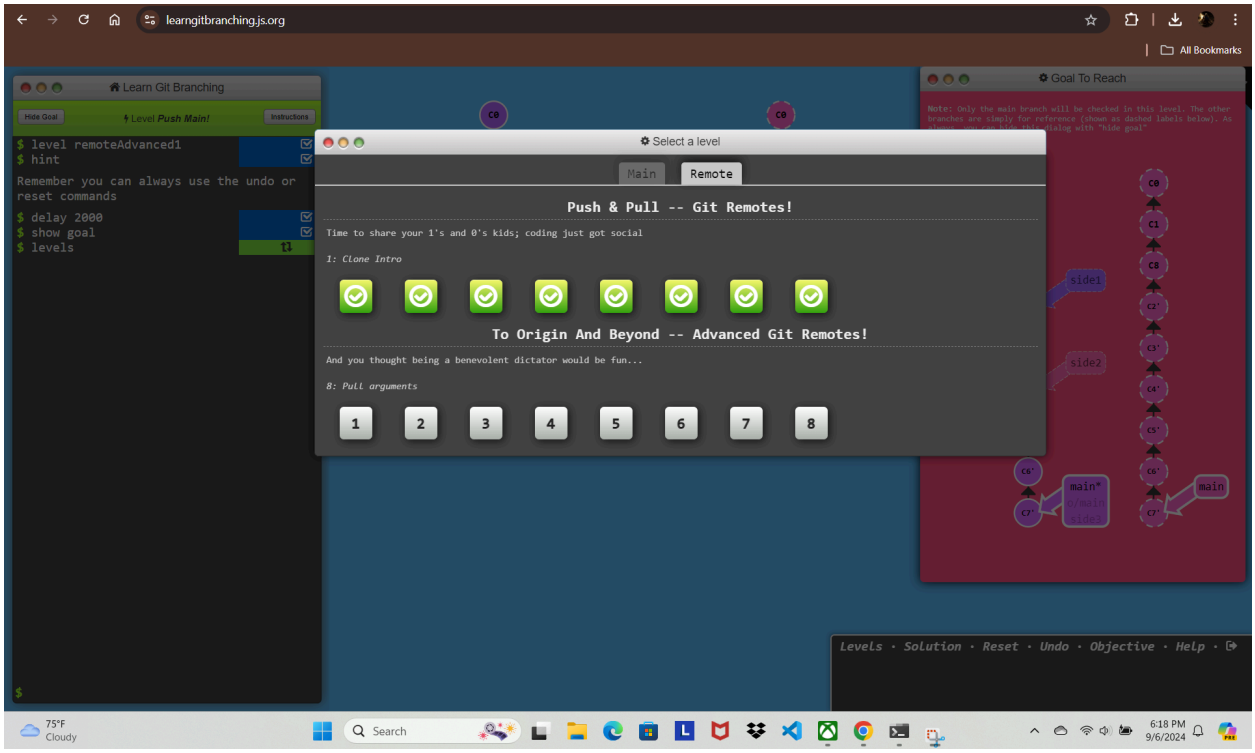
1. Completed



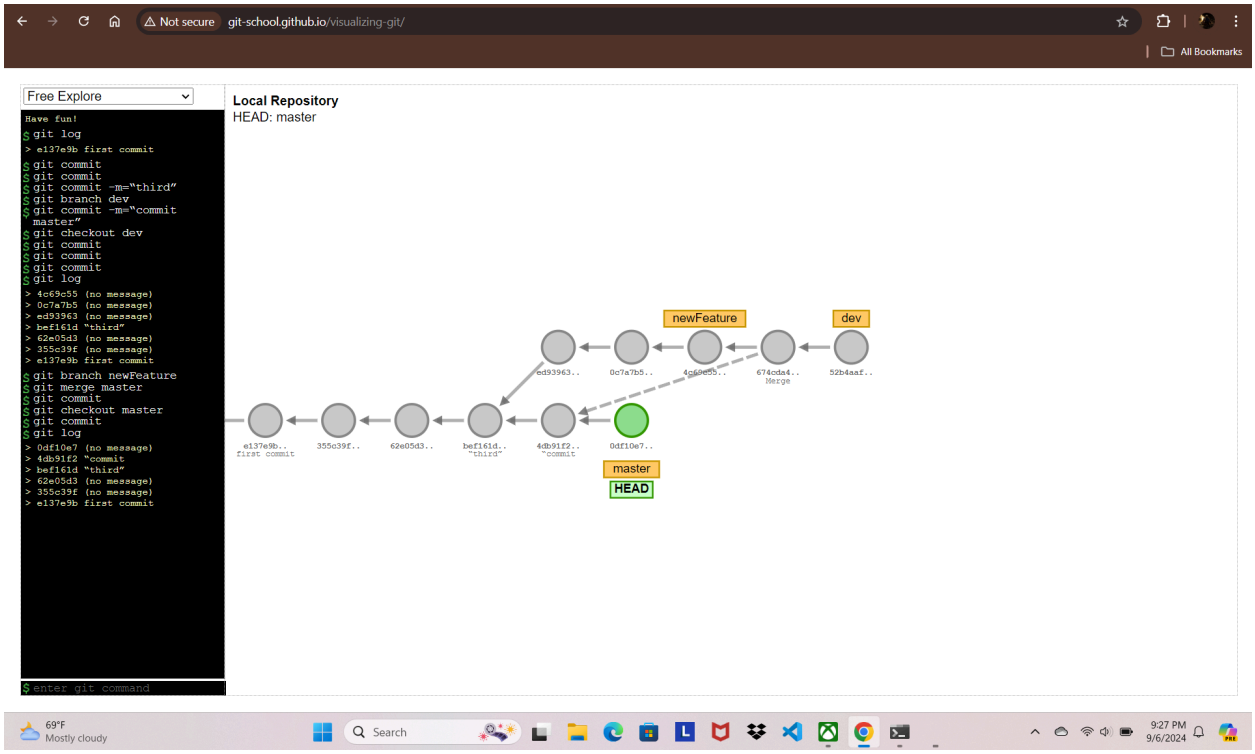
2. Introduction Sequence



Push & Pull -- Git Remotes!



3. Completed



4. Answers Below
    A. A .gitignore file is a file that is purposely untracked and that will be ignored by git. This means these files will remain untracked and discarded by git when changes occur. The purpose of these files is to important or temporary files from being put in a repository or tracked.
    B. The git command used to compare 2 commits is **git diff**.
    C. The head pointer in git is the position to the check-out commit in your repository. This will most likely be pointed towards the most recent commit in the check-out. You are able to move the head pointer by changing to a different check-out branch or going to a different commit. Commands such as git revert and git checkout will be able to accomplish this.
    D. The git command used to undo changes to a file in your working directory is **git restore**.
    E. The git command used to revert a git is **git revert**.
